

Design Upgrade

Undermount Lavatories

NOW FEATURING 3-HOLE FRONT OVERFLOW

Valued Customers,

Icera is rolling out a design change to **all undermount sink models**, both rectangular and oval designs. **All undermount sinks will soon feature 3 small front overflow holes**, instead of the single large overflow hole used in previous production.

This transition is already underway (and nearly complete) for the rectangular models - more information below. For the oval models, we expect to start shipping the new three-hole overflow design in Q2 2021.

Please note that, for ADA-compliant models, this is a rolling change. We will continue to fulfill orders with the older versions until stock is depleted, at which point we will start fulfilling with the upgraded models. For ADA-compliant models, a large "C" stamped on the product label indicates that the sink features the upgraded 3-hole overflow design. We suggest you sell through your existing stock of undermount lavatories and segregate the C-marked models as they are received, to avoid mixing when fulfilling client orders.

There will be no change to the model # for the upgraded sinks. You may continue to use the same model number when ordering.

As you may be aware, we are once again producing the non-ADA-compliant rectangular lavatories. **All non-ADA-compliant rectangular models will now feature the new 3-hole front overflow which is specified on the carton label.**
